

# Graded Project

## Problem Statement:

Create a to do list web app using Js ,html and css.

1. User can add a item in the to do list.
2. User should be able to edit the item after insertion in the to do list
3. User should be able to delete the item from the to do list.

Sample output-

The image shows a sample output of a To-Do List App. It features a title "To-Do List App" in a large, bold, blue font. Below the title is a text input field with the placeholder text "Add Todo". To the right of the input field is a blue button labeled "Add". Below the input field, the text "Demo Task" is displayed. To the right of "Demo Task" are two buttons: a green button labeled "Edit" and a red button labeled "Delete".

## General Instructions:

1. Write all your css code in a .css file.
2. You can use css or other library which takes care for the css.
3. Write all your JS code in a .js file.
4. Name the files appropriately.
5. Do not upload zip/compressed files
